## ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

Under Article 1 of the Convention signed in Paris on 14 December 1960, and which came into force on 30 September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The 20 original member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following 10 countries became members subsequently: Japan (1964), Finland (1969), Australia (1971), New Zealand (1973), Mexico (1994), the Czech Republic (1995), Hungary (1996), Poland (1996), Korea (1996) and the Slovak Republic (2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

Notes:

Data are OECD estimates

- not applicable

1. Purchasing Power Parities (PPPs) are the rate of currency conversion which eliminates the differences in price levels between countries. They are used to compare the volume of GDP in different countries. PPPs are obtained by evaluating the costs of a basket of goods and services between countries for all components of GDP; PPPs are given in national currency units per US dollar (in euro per US dollar for euro area countries)

2. Countries still using the System of National Accounts (SNA) 1968

Notes:

.. not available

2002. International comparisons should also take into account differences among countries in the length of tax brackets, the amount of tax relief and rates of social security contributions. The highest rate of income tax includes temporary special surcharges. All rates include rates of state and local income taxes as reported in the OECD Tax Database
2002. This percentage is influenced both by the overall tax level and the relative weight of personal income taxes and employees' social security contributions in national tax mixes

- One-earner family. Takes account of family allowances and/or Unweighted

- Includes personal and corporate incomes not available separately
- Includes employees and employers social security contributions not available separately

Notes:

- nil
- + growth more than 500%
- 1. These figures are based on an assumption of 100% efficiency for hydro-electric, 33% for nuclear and approximately 10% for geothermal plants
- 2. Includes hydro, geothermal, solar, wind, combustible renewables, waste and international trade in electricity
- 3. Million tonnes of oil equivalent

4. Total primary energy supply (in Mtoe) divided by GDP (in constant prices; 1995 USD)

Notes:

- CO<sub>2</sub> emissions are calculated using the IEA energy balances, the IPCC Sectoral Approach and the default emission factors from the *Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories*. They may differ from National Communications submitted by the Parties to the UNFCCC
- Kilogrammes of CO<sub>2</sub> per 1995 USD
- Tonnes of CO<sub>2</sub> per capita.

- Includes industrial waste and non-renewable municipal waste
- Excludes international marine and aviation bunkers

- Individual and labour market outcomes of education, 2000 unless otherwise stated
- At age 15 and therefore approaching the end of compulsory schooling
- Tertiary-type A includes ISCED level 5A leading to a BA, Masters or equivalent degree, and advanced research programmes (ISCED 6)
- Upper secondary education includes ISCED levels 3 and post-secondary non-tertiary education (ISCED 4)
  - Mostly medium first university programmes (3 to less than 5 years)
  - Mostly long first university programmes (5 to 6 years)

## GDP growth

average annual real change  
%, 1992-2002

The roar of Ireland's tiger economy may have dampened to a growl in the last year or two, but several years of double-digit growth has meant that over ten years, Ireland still recorded the fastest average GDP growth rate in the OECD area. In fact, at 7.9% per year in 1992-2002, it expanded far more quickly than the OECD average growth rate of 2.8%. The next fastest growth was in Korea. The United States was the only G7 economy to grow faster than the OECD average, whereas four G7 countries – France, Italy, Germany and Japan – were among the weakest performers. Japan and Switzerland were anchored at the bottom, with annual average growth of 1.1%.

## GDP per capita

OECD=100, using PPPs, 2002

Luxembourg had the highest GDP per head in 2002, at over \$50,000, above Norway, the US and Ireland. Comparing GDP per capita on a purchasing power parity basis like this can be revealing for large changes, like Ireland's rise over the last five years or Japan's slide to 15th in the OECD. But comparisons can be misleading if incomes are clustered in a small range. This is the case for France, Japan and the UK, which have broadly the same rank, with GDP per head at about \$27,000 (in PPP terms). That said, even the income groups in our graph are schematic and positions can shift from year to year. Canada, Denmark and Switzerland were in the high income group, according to the OECD index in 2001 (above 120), though now lead the high-middle income group. GDP per head in the three low income countries was less than half the OECD average of \$25,000.

## Consumer prices

December 2002/December 2001  
% change

Deflation may be a subject of intense conversation among many economists and policymakers. Yet, although OECD inflation was a modest 2.7% in the year to December 2002, five OECD countries – Mexico, Ireland, Hungary, Portugal and Spain – recorded inflation above 4%. Canada's consumer prices rose by just less than this rate (3.9%). In all cases, with the exception of Hungary, inflation was higher than a year earlier. Still, inflation stood above the OECD average in just two other G7 countries, but well below it in Germany (1.2%) and Japan (-0.3%). Consumer prices rose by 2.3% in the United States, and by less than 2% in Austria, Belgium, Finland and Iceland. This latter outcome contrasts with 2001 when Iceland's average inflation stood at over 6%.

## Services contributions to gross value added

%, 1991-2001

Services are a vital part of all OECD economies, from retailing to banking, consulting to legal services. The contribution of services in value-added increased in all countries between 1991 and 2001, except for Canada, Finland, Ireland and Norway. Services accounted for four-fifths of value added in Luxembourg, where financial services play a strong role. In the United States, they accounted for about three-quarters. In Switzerland, France and the UK they accounted for about 72%. Only in five OECD countries – Norway, Turkey, Czech Republic, Ireland and Korea – did services contribute less than 60% to gross value-added in 2001.

## Employment

Labour force participation rates  
25-54 and 55-64 year-olds, %, 2001

Iceland had the highest labour force participation rate among prime age workers between 25 and 54 in 2001, at some 92.3% of the total population in that age group, as well as the highest rate among older workers (55-64), at some 87.3%. Sweden, Norway and Switzerland also had relatively high labour force participation rates for older workers compared with their prime age counterparts. In the United States, 60.4% of 55-64 year-olds were in the labour force, which though higher than, say, in France (38.8%) or in Germany (43%), was lower than in Japan (66%). However, French and German prime age participation was higher than in the US – 86.3% and 85.6% respectively, compared with 83.7% – with the French figure being the highest of the G7 countries. Turkey and Mexico had the lowest prime age participation rates, at 59% and 69% respectively, but Hungary (24.2%), Luxembourg (24.9%), Belgium (26%) and Austria (29.4%) had among the lowest rates for older workers.

## Unemployment rates

% of civilian labour force, 2002

Unemployment stood at 6.3% on average in the OECD area in 2002. Unemployment was highest overall in the Slovak Republic and lowest in Luxembourg. Male unemployment was highest (19.8%) in the Slovak Republic too, whereas Poland recorded the highest female unemployment rate, also at 19.8%. The rate of joblessness was higher for women than for men in just over half of all OECD members, and in some countries the difference was marked. In Spain female unemployment fell slightly from a year earlier, but at over 15.2% of the female labour force, was double the rate for men. Male unemployment did not exceed female unemployment by very much in any country, with the most marked proportional differences in Hungary, Korea, Sweden and the UK.

## Gross Domestic Expenditure on R&D (GERD) % of GDP, 2001

Are governments and industry paying more than lip-service to developing the knowledge economy? Spending on research and development offers a few clues. Gross spending on R&D varies widely in OECD countries, ranging from over 4% in Sweden to less than 0.5% of GDP in Mexico. Just a third of OECD countries spend over 2% of their GDP on R&D, and only four countries spent over 3%, including Japan, which was the only G7 country to do so. Sweden's domestic spending on R&D was also highest in dollars per capita, at some \$1,112, ahead of the US with \$912 per head (see table, page 70).

## Business use of the Internet and web sites

% of businesses with ten or more employees\*, 2002, or latest available year

\*Except Japan (100 employees or more), Mexico (21+) and Switz. (5+)

How “wired” are businesses in the OECD area? Some 95-96% of firms in Japan, Finland, Sweden and Denmark had access to the Internet in 2002, but a relatively low 63% had access in the UK, ahead of lagging Mexico, though behind Greece, Portugal and Italy. Some of these differences are explained by sources – the UK figures are for 2001 and should evolve rapidly, and the Japanese data cover firms with over 100 employees, which typically have higher uptake of ICT. Nonetheless, the broad picture is revealing. Over 80% of firms had Internet access in 13 of the 21 OECD countries surveyed. Sweden, Japan and Denmark also led the field in terms of businesses having their own web sites and only in these three did web site ownership exceed 70%. In Australia, which is widely considered as a good student of the new economy, 89% of businesses had access to the Internet, but fewer than half had a web site. For more, see forthcoming *OECD Science, Technology and Industry: Scoreboard 2003*.

## Health spending

Per capita, \$ PPP, 2001

In 2001, health expenditure represented an average of 8.4% of GDP in the OECD area, up more than a full percentage point since 1990. The United States devotes a greater share of resources to health than any other OECD country, with 13.9% of GDP spent on health in 2001. Germany and Switzerland each spend over 10% of GDP on health. Yet, these countries do not necessarily deliver better health services than other countries, like France, which devotes less of its GDP to health than the biggest spenders, but achieves at least as good, if not better, results in areas like post-treatment life expectancy. There is a wide range in per capita health spending across the OECD, even when adjusted for purchasing power parities, from below \$1,000 per person in countries like Korea, Poland, Mexico and Turkey, to nearer \$5,000 per person in the United States (see table on pages 8-9).

## Life expectancy at birth

Years, men and women, 2001

Ageing is likely to become a growing challenge for health care systems in the years ahead, with life expectancy at birth improving across all OECD countries (see table pages 10-11). Although the lowest spenders on health appear to have a slightly shorter life expectancy than most, the same cannot be said of big spending countries. In the US, despite high health spending per head (see graph page 86), overall life expectancy, particularly for women, remains below that in many other OECD countries. Still, women can expect to outlive men everywhere in the OECD, and in some countries by several years. Women from Hungary, Poland and the Slovak Republic outlive their male counterparts by over eight years, and French and Korean women by 7.5 years. The narrowest gaps were about four years in Iceland and Sweden, where both male and female life expectancy is among the highest in the world.

## Road fatalities

Total number of deaths per million population  
2001

Road fatalities have been decreasing, but remain too high in most countries. Norway, the UK, Sweden and the Netherlands had the lowest levels of road fatalities in relation to population size in 2001, at around 58-62 deaths per million inhabitants; Greece, Luxembourg, the United States, Portugal and Poland had the highest, with Spain and France not far behind. Nowadays, road accidents are seen less as an inevitable price of lifestyle choices than as a public health issue par excellence. In developing countries, a million people are killed on the roads every year. OECD roads claim over 120,000 lives every year, with 17-25 and over 60 age groups most at risk. Another emerging concern is traffic deaths among older motorcyclists; in the US, a sharp increase in fatalities has been recorded for males over 40 riding larger motorcycles.

## CO<sub>2</sub> emissions from fuel combustion

Tonnes of CO<sub>2</sub> per capita, 2001

One of the main environmental goals in sustainable development is decoupling: how to slow, if not reverse, the growth of environmentally damaging emissions in relation to economic expansion. Some progress has been made, notably regarding the sulphur dioxide emissions that cause acid rain. But more needs to be done to slow the increase in carbon dioxide emissions, which are the principle cause of climate change. Without new major policy measures, CO<sub>2</sub> emissions will increase by a third by 2020, mainly due to increased transport and energy use. That means worse city air quality and damage to the biosphere that can undermine human welfare. In 2001, the US (20 tonnes per head), Luxembourg (19) and Australia (19) produced the most CO<sub>2</sub>, whereas Turkey (2.7), Mexico (3.6) and Sweden (5.4) produced the least.

## Direct Investment Flows

% of GDP, 2002

The Czech Republic was the OECD country with the highest inward direct investment in relation to economic size in 2002, with inflows valued at more than 16% of GDP. The neighbouring Slovak Republic also attracted strong inflows, as did Ireland, with some 14% of GDP. Inward investment was lowest in Mexico and Japan, while inflows to the United States were also low at just 0.3% of GDP. These were outstripped by US direct investment outflows of some 1.2% of GDP. Germany was the only G7 country where direct investment inflows (1.7% of GDP) exceeded outflows (1.1% of GDP). The lowest ratios of outflows to GDP were in Mexico, the Slovak Republic and Turkey.

## Development aid

Net ODA from DAC, \$ billion, 2002

Donor countries in the OECD Development Assistance Committee (DAC) increased their official development assistance (ODA) by almost 5% in real terms in 2002 to \$57 billion, raising ODA to 0.23% of gross national income (GNI). The increase reflects attempts to speed progress towards the Millennium Development Goals and marked the beginning of a recovery from the all-time low of 0.22% of GNI seen in 1999-2001. The rise included a 12% increase in US aid to \$12.9 billion (0.12% of its GNI), reflecting additional and emergency funds in response to the 11 September 2001 terrorist attacks, and health and humanitarian aid initiatives. Aid from EU countries rose 3% in real terms to \$29.1 billion, representing 0.34% of their combined GNI and including significant increases of 34% in Greece and 32% in Italy. Canada increased its aid by 32%, including debt forgiveness. Five countries – Denmark, Luxembourg, Netherlands, Norway and Sweden – met the UN target for ODA of 0.7% of GNI. Three other countries have also announced their intention to meet the 0.7% target: Ireland by 2007, Belgium by 2010 and France by 2012.
